**We have joined the Rackspace Partner Program
to offer a full suite of hosting solutions including:**
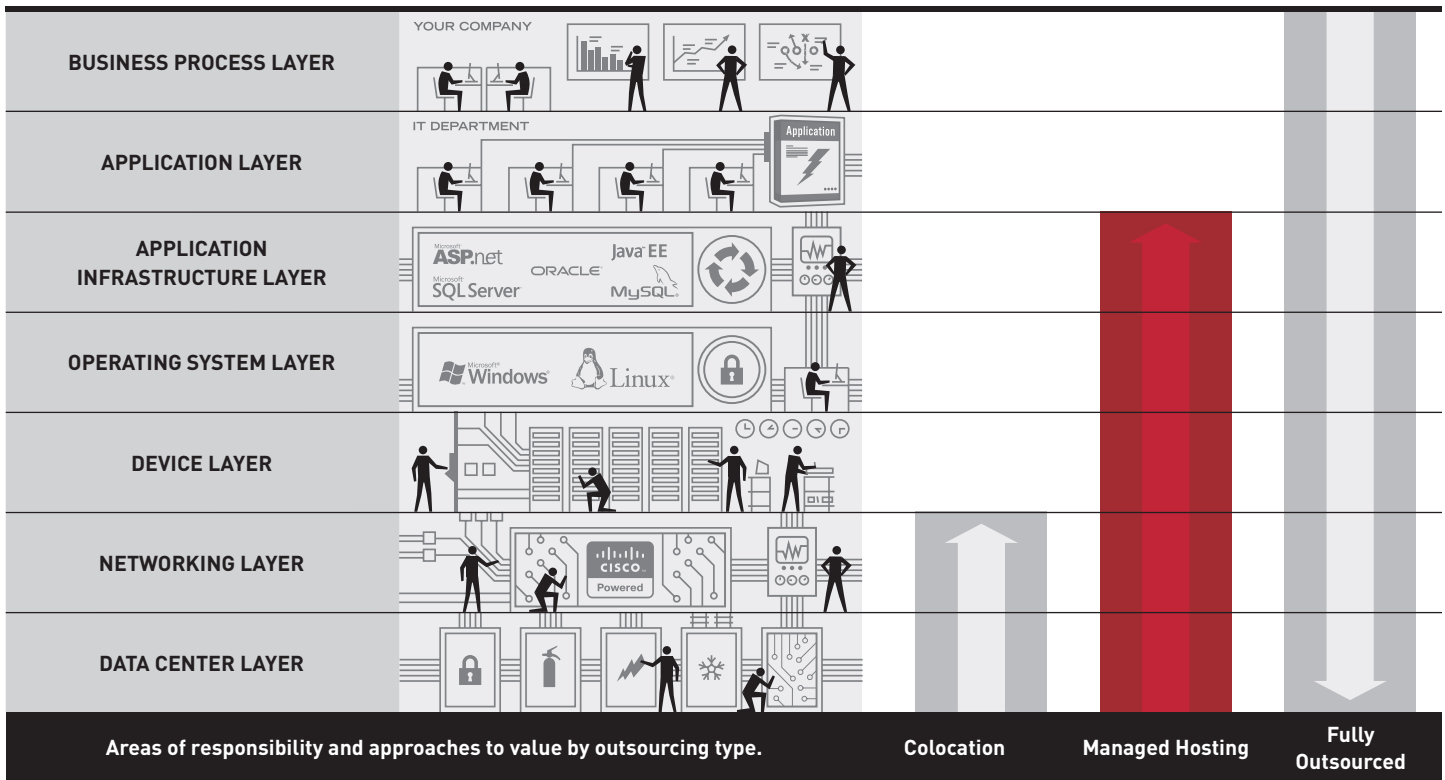

MANAGED HOSTING FROM RACKSPACE®

Dedicated Servers with Dedicated People Supporting Them

In a managed hosting environment, your provider owns and is responsible for the data center, network, devices, operating system and application infrastructure components, providing a stable operating environment for your applications. Your IT organization manages your applications and maintains full control over the operating system and application infrastructure.

Managed Hosting provides more value than colocation and dedicated hosting because it frees more of your IT personnel from mundane infrastructure related tasks, personnel that can now be reallocated to understanding and supporting your business more effectively. Managed Hosting also provides greater responsiveness than fully outsourced solutions because it emphasizes a flexible bottom-up approach to delivering value that puts you fully in control of your OS, application infrastructure and application. In addition, Rackspace® Hosting also delivers a number of key services designed to keep your applications secure, stable and responsive to your changing business needs.

		Colocation	Managed Hosting	Fully Outsourced
BUSINESS PROCESS LAYER	YOUR COMPANY			
APPLICATION LAYER	IT DEPARTMENT · Application			
APPLICATION INFRASTRUCTURE LAYER	ASP.net · ORACLE · Java EE · SQL Server · MySQL			
OPERATING SYSTEM LAYER	Windows · Linux			
DEVICE LAYER				
NETWORKING LAYER	CISCO Powered			
DATA CENTER LAYER				

Areas of responsibility and approaches to value by outsourcing type.

Microsoft GOLD CERTIFIED Partner · CISCO Powered · redhat PREMIER HOSTING PARTNER · vmware certified PROFESSIONAL
